## Why for Kids?

Infilens is a revolutionary knowledge augmentation tool for all age groups.

Using various mediums, we would be able to take the children and young audience to various levels of Simulated Reality and more.

- ★ AR and MR Based Flash Cards
- ★ Physical cards for kids to take home
- ★ Schools can provide one set of cards for every group of 3 students
- ★ Targets all age groups - Different kits
- ★ VR Compatible
- ★ Works on all Tablet and Phones (Android and iOS)
- ★ Driven completely through a core technology of 2019
- ★ Futuristic Learning

# InfiLens

Starters

*Shifting the learning curve from teaching to educating using technology.*

## Introduction

The augmented reality based flash cards can be used as a teaching aid which help kids learn faster and have better retention value. One would be able to see the AR when you use the InfiLens mobile application which is available for Android and iOS.

## Installation

Once installed, one may launch the AR camera in the application and point it towards the cards to see the AR elements. Each Alphabet card is programmed to support up to 3 words (One Fruit/Vegetable, One Animal/Insect and One Object).

## Interaction

All cards are interactive with audio and visual feedback. Kids could zoom, rotate, listen to each alphabet or listen to how the word is pronounced. Majority of the cards are animated to help the kids understand how the animal or insect moves.
